

Izabela M. Tolentino – Technical Game Designer

izabela.tolentino@gmail.com | California, USA | <http://izabela-tolentino.github.io/> | www.linkedin.com/in/izatolentino

EXPERIENCE

Bungie

August 2021 - July 2026

Technical Designer

June 2023 - July 2026

Associate Designer

August 2021 - May 2023

- Shipped 4 expansions and 11 major updates for *Destiny 2*, a live-service FPS multiplayer looter shooter
- Designed, implemented, iterated on, polished, and had technical ownership over 7 PvP game modes (ranging from casual party and event modes to a competitive mode used in ranked play) using:
 - proprietary engine (Tiger engine) & scripting language (Bungiescript)
 - knowledge of competitive experiences and multiplayer map level design
 - regular playtest feedback and collaboration across different disciplines including other designers, test, world art, sandbox, engineering, cinematics, audio, vfx
- Developed modifier system extending existing mode script architecture to improve modularity in PvP scripts:
 - enabled more flexibility and faster PvP mode development
 - added more private match modifier options for players to choose from
- Provided technical design support for 10 PvP maps (both new and ported) and general upkeep across 30+ maps
- Regularly tuned, upkept, and fixed live bugs across evergreen PvP and PvE activities and systems based on scope, technical limitations, live data, player sentiment, overall design goals, and internal feedback
- Created and maintained design & technical documents for effective communication across different audiences
- Engaged in playtesting, providing feedback and logging bugs as needed

RELEVANT PERSONAL PROJECTS

Project Stealth

December 2020 - August 2021, July 2026 - Present

Game Designer

- Prototyped stealth mechanics in Unreal (C++) and Unity (C#) using vector math / linear algebra in a 3D space
 - Currently developing project in Unreal Engine 5
- Designed core game features with a focus on partner stealth, story, and discovery
- Writing and revising game's story and narrative elements

hoaXcape duet (FPS Combat Prototype)

February 2021 – May 2021

Game Designer (Developed under a Ubisoft mentorship program)

- Rapidly prototyped various combat abilities with distinct progression stages to implicitly tell game narrative
- Wrote C# scripts for various combat mechanics in Unity (ability system, stackable combos, etc.) using skills in vector math / linear algebra in a 3D space and object-oriented programming
- Iterated on prototype and made adjustments based on design mentor feedback

SKILLS

Design: Competitive Multiplayer, Gameplay, Systems, Technical, Rapid Prototyping, Cross-Discipline Collaboration

Software: Unreal Engine, Unity, Blender, Adobe Photoshop, Autodesk Maya, Tiger Engine (Bungie: Destiny 2)

Languages: C++, C#, Lua, C, Python

Tools: Jira, Perforce, Git, Visual Studio

EDUCATIONAL BACKGROUND

University of California, San Diego (UCSD)

B.S. in Mathematics-Computer Science

Graduated June 2020
